

# L'extension rawfonts<sup>\*</sup>

Alan Jeffrey

v0.01

Ce fichier est maintenu par l'équipe du « L<sup>A</sup>T<sub>E</sub>X Project ». Les rapports d'anomalie peuvent être envoyés en anglais à <http://latex-project.org/bugs.html> (catégorie `tools`).

## 1 Généralités

✱The `rawfonts` L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> package is used to provide emulation of L<sup>A</sup>T<sub>E</sub>X 2.09 documents which used low-level commands such as `\tenrm`. If you say :

```
\usepackage{rawfonts}
```

then over sixty fonts such as `\tenrm` will be loaded into L<sup>A</sup>T<sub>E</sub>X. This has a large overhead, for example this document uses :

```
8221 words of font info for 30 fonts
```

but when run with the `rawfonts` package it uses :

```
19294 words of font info for 73 fonts
```

That is `rawfonts` can cause your document to load twice as many fonts. (This overhead is why L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> does not define `\tenrm` and friends by default.)

If you want to only load a small number of fonts, you can use the `only` option, for example to only load `\tenrm` and `\tensf` :

```
\usepackage[only,tenrm,tensf]{rawfonts}
```

<sup>\*</sup>Ce fichier a pour numéro de version v0.01 et a été mis à jour le 08/05/1994. La première traduction, basée sur la version v0.01 titrée « *The rawfonts package* », a été publiée par Jean-Pierre Drucbert le 3 décembre 1999.

The `rawfonts` package is intended mainly for use with L<sup>A</sup>T<sub>E</sub>X 2.09 documents, and you might want to have the package loaded every time you use L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> in compatibility mode. In this case, you should add the line :

```
\RequirePackage{rawfonts}
```

to your `latex209.cfg` L<sup>A</sup>T<sub>E</sub>X 2.09 compatibility configuration file.

## Implementation

The driver for the documentation you're now reading.

```
1 <*driver>
2 \documentclass{ltxdoc}
3 \usepackage[ltxdoc,inputenc,fontenc,babel]{translatex-fr}
4 \begin{document}
5 \DocInput{rawfonts-fr.dtx}
6 \end{document}
7 </driver>
```

This is a L<sup>A</sup>T<sub>E</sub>X 2<sub>ε</sub> package.

```
8 <*package>
9 \NeedsTeXFormat{LaTeX2e}
10 \ProvidesPackage{rawfonts}
11 [1994/05/08 Low-level LaTeX 2.09 font compatibility]
```

The `rawfonts` package uses the `somedefs` package.

```
12 \RequirePackage{somedefs}
```

By default, all the fonts are loaded, but the `only` option says that only the ones specified as options should be.

```
13 \UseAllDefinitions
14 \DeclareOption{only}{\UseSomeDefinitions}
15 \DeclareOption*{\UseDefinition{\CurrentOption}}
16 \ProcessOptions
```

The rest of the code loads fonts. Five point :

```
17 \ProvidesDefinition{\DeclareFixedFont{\fivrm}{OT1}{cmr}{m}{n}{\@vpt}}
18 \ProvidesDefinition{\DeclareFixedFont{\fivmi}{OML}{cmm}{m}{it}{\@vpt}}
