L'extension rawfonts*

Alan Jeffrey

v0.01

Ce fichier est maintenu par l'équipe du « LATEX Project ». Les rapports d'anomalie peuvent être envoyés en anglais à http://latex-project.org/bugs.html (catégorie tools).

1 Généralités

L'extension LATEX 2ε sert à émuler des documents LATEX 2.09 utilisant des commandes de bas niveau comme \tenrm. Si vous saisissez :

\usepackage{rawfonts}

alors près de 60 fontes telles que \tenrm seront chargées dans LATEX. Cette opération représente un surcoût important. Ainsi, ce document utilise selon le fichier journal :

20507 words of font info for 51 fonts

soit 20507 mots d'informations pour 51 fontes. Lorsque l'extension rawfonts est chargée, il utilise :

30987 words of font info for 93 fonts

soit 30987 mots d'informations pour 91 fontes. Ce qui montre que rawfonts peut causer le chargement de deux fois plus de fontes pour des documents simples (ce surcoût explique d'ailleurs pourquoi LATEX 2_{ε} ne définit pas \tenrm et ses semblables par défaut).

Si vous ne voulez charger qu'un petit nombre de fontes, vous pouvez utiliser l'option only; par exemple, pour ne charger que \tenrm et \tensf, il faut saisir :

\usepackage[only,tenrm,tensf]{rawfonts}

^{*}Ce fichier a pour numéro de version v0.01 et a été mis à jour le 08/05/1994. Son titre original est « *The rawfonts package* ». La première traduction, basée sur la version v0.01, a été publiée par Jean-Pierre Drucbert le 3 décembre 1999.

L'extension rawfonts est destinée à être principalement utilisée avec des documents LATEX 2.09 et vous pourriez souhaiter avoir l'extension chargée à chaque fois que vous utilisez \LaTeX 2_{ε} en mode compatibilité. Dans ce cas, vous devriez ajouter la ligne suivante:

\RequirePackage{rawfonts}

à votre fichier latex209.cfg de configuration de compatibilité LATEX 2.09.

Implémentation

```
Le pilote de la documentation que vous êtes en train de lire <sup>1</sup>.
1 (*driver)
2 \documentclass{ltxdoc}
3 \usepackage[ltxdoc,inputenc,fontenc,babel]{translatex-fr}
4 \begin{document}
5 \DocInput{rawfonts-fr.dtx}
6 \end{document}
7 (/driver)
Il s'agit ici d'une extension \LaTeX 2_{\varepsilon}.
8 (*package)
9 \NeedsTeXFormat{LaTeX2e}
10 \ProvidesPackage{rawfonts}
      [1994/05/08 Low-level LaTeX 2.09 font compatibility]
L'extension rawfonts recourt à l'extension somedefs.
```

12 \RequirePackage{somedefs}

Par défaut, toutes les fontes sont chargées. L'option only indique que seules les fontes passées comme options doivent être chargées.

```
13 \UseAllDefinitions
14 \DeclareOption{only}{\UseSomeDefinitions}
15 \DeclareOption*{\UseDefinition{\CurrentOption}}
16 \ProcessOptions
```

Le reste du code charge les fontes. Cinq points :

```
17 \end{\text{\corr}} \{0T1\} \{cmr\} \{n\} \{n\} \{0vpt\} \}
```

- 19 \ProvidesDefinition{\DeclareFixedFont{\fivsy}{OMS}{cmsy}{m}{n}{\Qvpt}}
- $20 \end{\text{\fivly}{U}{lasy}{m}{n}{\colorer} }$

Six points:

```
21 \ProvidesDefinition{\DeclareFixedFont{\sixrm}{OT1}{cmr}{m}{n}{\Qvipt}}
```

- 22 $\Pr \{0ML}{cmm}{m}{it}_{0}$
- 23 $\Pr \ensuremath{\sixsy}_{0MS}_{cmsy}_{n}_{n}_{0vipt}}$
- 24 $\Pr \left(\sum_{x \in \mathbb{Z}} \mathbb{T}_{x}\right)$

^{1.} N.D.T.: ce document étant une traduction, le pilote est ici modifié par rapport à la version originale. La ligne 3 a été ajoutée et la ligne 6 importe rawfonts-fr.dtx au lieu de rawfonts.dtx.
