### Introduction

Cette extension est une nouvelle implémentation de l'extension ifpdf de Heiko Oberdiek, intégrant une structure simplifiée et une mise à jour avec la version actuelle de LuaT<sub>F</sub>X.

L'extension définit un nouveau booléen, \ifpdf qui est vrai pour pdfTFX et LuaTeX en mode PDF, et qui est faux sinon.

#### $\mathbf{2}$ Implémentation

1 (\*package)

If \ifpdf is not defined define it, taking care that it is outer in plain TFX.

- 2 \expandafter\ifx\csname ifpdf\endcsname\relax
- 3 \csname newif\expandafter\endcsname\csname ifpdf\endcsname
- $4 \ensuremath{\setminus} else$

If \ifpdf is already defined but \pdftrue is not defined give up.

- 5 \ifx\pdftrue\undefined
- \ifx\PackageError\undefined
- \begingroup\def\PackageError#1#2#3{\endgroup\errmessage{#2}}
- \PackageError{ifpdf}{incompatible ifpdf definition}{}
- \expandafter\expandafter\expandafter

<sup>\*</sup>Ce fichier a pour numéro de version v3.1 et a été mis à jour le 14/05/2016. Son titre original est « The delarray package ». Merci de soumettre les anomalies rencontrées à l'adresse https://github.com/ho-tex/oberdiek/issues.

```

Otherwise set the boolean to false unless pdfoutput (output mode) is greater than zero. For LuaTeX, do the test in Lua as the tex primitivies may not be enabled, and the primitive name may be <page-header> version number.

13 \let\ifpdf\iffalse

14 \ifx\directlua\undefined

```
Not LuaT<sub>F</sub>X.
